INTERREG ITALY-CROATIA PROGRAMME 2021 – 2027

STRATEGIC ENVIRONMENTAL ASSESSMENT (SEA)

EXTRACT FOR BENEFICIARIES

1st Call for Proposals

(Version 1.0 – 17th November 2022)

In compliance with Directive 2001/42/EC (the SEA Directive), the Programme implemented the Strategic Environmental Assessment (SEA) to assess the effects of certain plans and programmes on the environment. The SEA ensured that the environmental concerns are appropriately integrated in the decision making and implementation process of the Programme.

The Strategic Environmental Assessment of the Italy-Croatia Programme, began with the “Scoping” phase in August 2021 that was concluded in September 2021. This was followed by the drafting of the Environmental Report (ER) and the related Non-Technical Summary which was made available for public consultation from December 2021 to January 2022. No comments were received from the public or stakeholders on the contents of the Programme and of the Environmental Report, while the reasoned opinions expressed by the Environmental Authorities of Croatia and of the seven Italian Regions included in the cooperation area and the evaluations of the comments are included in Annex IV.

Given the complexity of the Environmental Report, an extract of 3 parts (that are also important for project evaluation purposes) is provided below for beneficiaries to better understand the importance of SEA.

1. SEA and project selection

The Annex IV of Strategic Environmental Assessment (SEA) contains suggestions for establishing guidelines for integrating environmental aspects for project selection and Programme implementation.

This part defines elements, in relation to the environmental dimension and sustainable development, aimed at improving the Programme's contents and environmental effects. A number of suggestions related to the cultural and environmental sphere are then listed, divided into types of interventions. Please take note that your project proposal when assessed against the following sub-criterion: „Do the actions proposed aim to effectively achieve the environmental sustainability objectives of the cooperation area as specified in Strategic Environmental Assessment?“, will be matched (considering the Programme Specific Objective in which the proposal is included) with the following detailed guidelines.

Framework	Detailed guidelines	Specific objective
As part of the framework of environmental sustainability interventions	<ul style="list-style-type: none"> Environmental rewards should be given for innovative projects focusing on environmental sustainability or providing sustainable actions or "exclusion criteria" in the case of environmental constraints or criticalities; Rewarding criteria should be given to improve the sustainability and integration of the environmental component, with a higher weighting in terms of scores given to projects with higher environmental value; In the evaluation of project proposals ensure appropriate assessment of environmental aspects and external / internal coherence with planning, linking projects with the current state of landscape planning; Are the types of actions assessed as compatible with the DNSH principle 	SO 1.1 SO 1.4 SO 2.1 SO 2.2 SO 3.1 SO 4.1 SO 5.1
As part of the framework of the interventions against climate change	Award interventions and projects on "Integrated Coastal Zone Management" (ICZM), aimed at mitigating and adapting to climate change.	SO 2.1 SO 2.2 SO 5.1

Italy – Croatia

Framework	Detailed guidelines	Specific objective
As part of the framework of the interventions related to environmental and marine protection	<p><u>Award:</u></p> <ul style="list-style-type: none"> • Interventions and projects that contribute to the enrichment of marine and terrestrial biodiversity, to the preservation of natural marine-coastal ecosystems, analysis and periodic monitoring and mapping of the state of conservation of habitats and to boost the knowledge on coastal and marine ecosystem services. • Interventions and actions aimed at increasing awareness of the value of protected areas as a whole, rather than the individual naturalistic emergencies that comprise them, as well as landscape protection and cultural heritage. • Interventions and projects that include studies and monitoring of solid transport in waterways and along the coast, off-shore deposits of sediments useful for beach nourishment (extraordinary maintenance interventions) and development/application of new low-impact technologies aimed at restoring the natural flow of sediments. • Actions to remove plastic from the sea and along the coasts. Activities for the conservation of coastal wetlands at transboundary level. • Realization of ecological corridors to reduce the fragmentation of coastal ecosystems due to roads and urbanization. 	SO 2.2 SO 3.1 SO 4.1 SO 5.1
As part of the framework of the interventions related to marine planning and blue economy	<p><u>Award projects that address:</u></p> <ul style="list-style-type: none"> • Understanding of the effects of human activities (individual or cumulative) on the marine environment, as well as the design (or testing) of mitigation measures to support marine strategy and marine spatial planning. • Knowledge of coastal hydraulic dynamics and associated risks (erosion, marine ingression) combined with studies and modeling to support the design of new coastal defense infrastructures that integrate multiple functions (resilient coastal defense and enhancement of marine biodiversity). • Training for operators in the "blue economy," with a focus on those in the fishing industry (small-scale fishing and professional fishing). 	SO 1.2 SO 2.2 SO 5.1

Italy – Croatia

Framework	Detailed guidelines	Specific objective
As part of the framework of transportation and infrastructure interventions	<p><u>Promote:</u></p> <ul style="list-style-type: none"> Interventions aimed at sustainable transport to reach Natural Protected Areas and projects to convert road infrastructures to "soft mobility". Interventions aimed at improving environmental performance and reducing pressures on major Ports. <p><u>Avoid:</u></p> <ul style="list-style-type: none"> Physical interventions (including renewable energy installations) and provision of small-scale infrastructures and buildings on Natura 2000 Sites, when not in line with the Conservation Measures and the Site Management Plan, and close to habitats and nesting areas of protected species. Crossing Natura 2000 Sites in transport links to ports and marine transport services, or otherwise requiring appropriate prior assessment at the project level. <p><u>Require:</u></p> <ul style="list-style-type: none"> Assessment of impacts caused to coastal marine habitats due to the identification of new routes. 	SO 2.2 SO 3.1 SO 5.1
As part of the framework of the interventions related to landscape and cultural protection and valorization	<ul style="list-style-type: none"> Consider landscape and cultural heritage protection measures, particularly referring to SO 4.6 "Enhance the role of culture and sustainable tourism in economic development, social inclusion and social innovation". Evaluate the potential impact on landscape both in terms of land consumption and transformation of places, as a result of the foreseen implementation of renewable energy technologies, the development of cross-border mobility services and the increase in tourism. Submit the actions that will involve modification of the subsoil structure, also in relation to the seabed, to the procedure of prior verification of archaeological interest pursuant to art. 25 of Legislative Decree 50/2016, with specific reference to the obligation to prepare, already in the feasibility study phase, the document of prior archaeological assessment. In general, it is recommended a timely application, in the appropriate stages of project preparation, of the provisions of art. 25 of the Code of Public Contracts (Codice dei Contratti pubblici) (Legislative Decree 50/2016 and amendments), as a best practice to ensure the preservation of the state of sites and assets of archaeological interest. Prepare measures/actions to prevent, reduce and compensate for any significant adverse effects related to the implementation of the plan on the landscape and cultural heritage components, including UNESCO 	SO 4.1 SO 5.1

Framework	Detailed guidelines	Specific objective
	<p>sites, as well as specific measures regarding the monitoring and control of significant environmental effects.</p> <ul style="list-style-type: none"> Put in place the procedures for preventive archaeological protection provided by Legislative Decree 42/2004, art. 28, c. 4 Art. 28, paragraph 4 and amendments: "In case of implementation of public works falling in areas of archaeological potential, even when for them have not taken place the verification referred to in Article 12, paragraph 2, or the declaration referred to in Article 13, the superintendent may require the execution of preventive archaeological tests on the areas themselves at the expense of the client" (<i>original sentence in Italian: "In caso di realizzazione di lavori pubblici ricadenti in aree di potenziale archeologico, anche quando per esse non siano intervenute la verifica di cui all'articolo 12, comma 2, o la dichiarazione di cui all'articolo 13, il soprintendente può richiedere l'esecuzione di saggi archeologici preventivi sulle aree medesime a spese del committente"</i>). Particular attention will be paid to areas protected by the landscape pursuant to articles 136 and 142 of Legislative Decree 42/2004, for which the acquisition of a Landscape Permit (Autorizzazione Paesaggistica) is required. 	
As part of the framework of the interventions related to sustainable tourism	<p><u>Award:</u></p> <ul style="list-style-type: none"> As part of interventions to promote sustainable tourism, encourage those that do not generate additional flows of people in vulnerable or protected areas. Projects that plan to reduce land use outside of official trails. Projects capable of preventing damage to habitats linked to the anchoring of vessels. Projects that implement training activities for tourists and managers of tourist activities for a more sustainable tourism. <p><u>Avoid:</u></p> <ul style="list-style-type: none"> Interventions that increase land consumption and discourage those that generate significant road transport flows. In protected habitats, with particular attention to coastal habitats or high endemism, direct attendance related to the development of tourism in the areas concerned, if not through guided tours that promote the development of environmental awareness by users. 	<p>SO 2.2 SO 3.1 SO 4.1 SO 5.1</p>

Italy – Croatia

Framework	Detailed guidelines	Specific objective
As part of the framework of the interventions related to protected areas	<p><u>Promote:</u></p> <ul style="list-style-type: none"> Interventions aimed at increasing understanding of the value of protected areas as a whole, rather than the individual naturalistic emergencies that comprise them, including reorganization and managerial requalification of Natural Protected Area visitor centers. Interventions in accordance with the conservation measures and management plans of the sites potentially affected and actions that provide for the constant monitoring of habitats and species present, in order to ensure their effective conservation. 	<p>SO 2.2</p> <p>SO 4.1</p> <p>SO 5.1</p>

2. DNSH

For the purposes of the Programme, DNSH (Do No Significant Harm) is to be interpreted within the meaning of Article 17 of the „Taxonomy Regulation“. This Article defines what constitutes ‘significant harm’ for the six environmental objectives covered by the „Taxonomy Regulation“.

The analysis of compliance with DNSH principle has been carried out for each of the seven Programme Specific Objectives in the SEA.

The conclusion of the analysis of compliance is that the Programme comply with the DNSH principle, as the actions do not generate significant negative environmental impact.

Anyhow, the Programme is also responsible for the implementation of DNSH principle throughout the programming period and specifically in selection phase during the Clearing Conditions step. In doing so, only those operations that comply with the Programme (as the Programme itself comply with DNSH principle) and with applicable EU and National law will be selected. The assessment of the respect of operations of the DNSH principle will be carried out (SO per SO) comparing the project proposal with the aggregated typology of actions (line of interventions) taken into consideration in the Programme DNSH assessment.

The tables below have been structured based on the document “Application of the do no significant harm principle under Cohesion Policy”. Moreover, the Annex I, part II of the Commission Notice (C/2021/1054), Technical Guidance on the application of “do not significant harm” under the Recovery and Resilience Facility Regulation 2021/C 58/01, has also been considered. The elements in the first column are consistent with Article 17 of the Taxonomy Regulation. The actions related to the column "explanation on the significance of interaction" in the tables below, refer to aggregated typologies of action.

SO 1.1 “Developing and enhancing research and innovation capacities and the uptake of advanced technologies”		Line of intervention		Indication of references in the Environmental Report to support the assessment of DNSH objectives
		Actions to promote synergies with other programmes	Actions for development, innovation, application and transfer of technologies, systems and tools, know-how and good practices	
Topic art. 17 Taxonomy ¹	Evaluation criteria	Explanation on the significance of the interactions		
Climate change mitigation	Is the measure expected to lead to significant GHG emissions?	No, SO actions have a positive effect on reducing greenhouse gases and promoting sustainable energy policies, such as improving energy efficiency	No, SO actions have a positive effect on reducing greenhouse gases and promoting sustainable energy policies, such as improving energy efficiency	Section VII.2 Environmental effects of the Environmental Report
Climate change adaptation	Is the measure expected to lead to an increased adverse impact of the current climate and the expected future climate, on the measure itself or on people, nature or assets?	The actions considered inside the SO does not envisage significant interactions with respect to the component under consideration	The actions considered inside the SO does not envisage significant interactions with respect to the component under consideration	
Sustainable use and protection of water	Is the measure expected to be detrimental:	No, the actions of the SO have a positive indirect effect on the marine	No, the actions of the SO have a positive indirect effect

Pollution prevention and control to air, water or land	Is the measure expected to lead to a significant increase in the emissions of pollutants into air, water or land?	The action line does not foresee significant interactions with respect to the component under consideration	No, although the actions of the SO are not directly aimed at acting on the improvement of air quality, a positive indirect effect is expected on this component and an effect that cannot be assessed at this stage on water and soil. Specific mitigation measures have been identified in order to reducing the production of pollutants on water and soil, such as the selection of projects that reduce pollution and anthropogenic pressure on coastal areas, in section VIII.I of the Environmental Report.	No, although the actions of the SO are not directly aimed at acting on the improvement of air quality, a positive indirect effect is expected on this component and an effect that cannot be assessed at this stage on water and soil. Specific mitigation measures have been identified in order to reducing the production of pollutants on water and soil, such as the selection of projects that reduce pollution and anthropogenic pressure on coastal areas, in section VIII.I of the Environmental Report.	No, although the actions of the SO are not directly aimed at acting on the improvement of air quality, a positive indirect effect is expected on this component and an effect that cannot be assessed at this stage on water and soil. Specific mitigation measures have been identified in order to reducing the production of pollutants on water and soil, such as the selection of projects that reduce pollution and anthropogenic pressure on coastal areas, in section VIII.I of the Environmental Report.

3. Policy framework

The Environmental Report (Appendix 3) lists “STRATEGIES, PLANS AND PROGRAMMES RELEVANT FOR THE COOPERATION AREA SUGGESTED DURING THE CONSULTATION”. In this part the beneficiaries will find the framework of policy and strategy at European level for all environmental issues. In particular the following table shows a list of Plans and Programmes suggested in the scoping phase of the SEA. The list is intended to help the beneficiaries in checking the consistency of the project proposal designs with the normative packages.

COMMUNITY-LEVEL POLICIES	
Topic	Reference
Biodiversity/landscape and cultural heritage	<p><i>Pan-European Biological and Landscape Diversity Strategy (PEBLDS), approved at the Ministerial Conference ‘Environment for Europe’ (Sofia, Bulgaria, 23-25 October 1995)</i></p> <p><i>European Landscape Convention (‘Florence Convention’, Council of Europe Treaty Series no. 176)</i></p> <p><i>Communication from the Commission - Agenda for a sustainable and competitive European tourism (COM/2007/0621)</i></p> <p><i>Aarhus Convention (25 June 1998)</i></p> <p><i>Habitat Directive (92/43/EC)</i></p> <p><i>Birds Directive (2009/147/EC)</i></p>
