## Rome - Italy Roundtable: Supply Chain Innovation

The Council of Supply Chain Management Professionals organized a day dedicated to innovation in the Supply Chain, with a focus on transport and deliveries to consumers on 11<sup>th</sup> April 2019 in Rome, Italy.

Among the interventions of this day dedicated to innovation and the development of transport, the supply chain, during which traceability, serialization, blockchain are the beating heart between the topics addressed, there was also a moment dedicated to Elevante and the presentation of the TRANSPOGOOD project. The main result of the project, which is now in the final stages of finalization, is the development of an innovative tool (the TRANSPOGOOD platform) at the service of operators (loaders and conveyors) to identify the best transport solution in terms of cost, time and impact environmental. The TRANSPOGOOD platform wants to promote innovation with the development of new multimodal transport solutions in the Adriatic area, providing more transparent information on available solutions and innovative high value-added services for travel organization.
