transport, which will eventually converge processes on alternative and green passenger transport services. The project team will implement activities aiming at verifying the feasibility of a solution based on the pilot actions realized during the project. iris aims to explain them project interest groups to better understand and identify solutions which have to be met in the future, that will contribute to a better and more efficient islands’ connectivity in the future, taking into account environmental aspects and social criteria.

The DUBROVNIK NERETVA REGION and the ISTRIAN DEVELOPMENT AGENCY are the two key stakeholders in the project. To improve traffic modalities, the Regional Development Agency of the Western Slavonia, Baranja and North Croatia, by improving traffic modalities. MRRFEU will also lead and contribute to the project by providing technical and management evidence on how to establish an effective and functional system to control and reduce the impact of transport on the environment.

Since the project started, we are collaborating online and preparing some outputs that will follow soon... Our partnership is numerous and firstly we want to present the people who are doing that.
