

Improving the Cyber RESilience and Security of Adriatic PORTs

PROJECT DURATION
01/03/2024 - 31/08/2026

ERDF
1,927,889.60 €

TOTAL BUDGET
2,409,862.00 €

The **CRESPOINT project** aims to address the challenges related to **Cyber Resilience and Security** in Adriatic Ports. Its main objective is to strengthen **defense against cyber attacks** and enhance the **ability to rapidly restore systems** after a disaster.

To achieve these goals, **CRESPOINT** adopts a **more attentive and cross-border approach**, based on a **common and coordinated strategy** aligned with **international frameworks** for the cybersecurity of critical infrastructures.

CROSS-BORDER APPROACH

Digitalization significantly boosts **supply chain competitiveness** but also introduces **considerable cyber risks**, especially for ports. To effectively counter these threats, **CRESPORT** fosters **cooperation**.

The project will deliver various outputs for ports and stakeholders, including **joint actions** and **training programs**, **innovative IT tools** and **solutions for secure data exchange**, and a **unified cybersecurity strategy and master plan**.

Its innovation lies in a comprehensive approach that recognizes the strong **interconnection between ports** and their **vital role in maritime trade**, crucial for **economic growth** and **societal well-being**. By strengthening port resilience and integration, **CRESPORT** supports the **prosperity** of coastal communities and enhances **maritime connectivity** across the Adriatic region.

CRESPOINT will create a **synergy** between Port Authorities balancing their **diversities**.

Adriatic Ports play a strategic role in **logistics and commercial development**. In recent years, they have experienced **significant growth** in maritime transport, both in logistics operations and cargo handling. As maritime traffic increases, cyber attacks are also becoming more frequent and sophisticated.

Given the territorial and geographical importance of the Adriatic Ports, a major shared challenge is empower each port's capacity to **detect and respond to cyber threats early**, thereby increasing the overall security of the area.

CROSS BORDER AND MULTILATERAL COOPERATION

A strong multilateral cooperation, through the adoption of joint actions and shared strategies, makes it possible to achieve:

- a concrete response
- a significant opportunity for growth

Tackling this challenge with a **cross-border approach** also represents an interesting opportunity to **strengthen the strategic role of the territories and consolidate their governance.**

”
*Different ports,
the same challenge.*

STRATEGY AND ACTION PLAN

Through a cross-border cooperation, CRESPOINT will lead to:

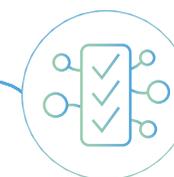

Training on Cyber Resilience and Security: to raise the awareness of the stakeholders.

Enhancement of the Cyber Resilience and Security: setting up common analysis and knowledge sharing.

Simulation of a cyber-attack and/or disaster: (e.g. penetration test, cascading effects).

Cross-border Strategy for improving Cyber Resilience and Security of Adriatic Ports: a strategic document defining the minimum requirements.
