1.1 IN4BLUE project .....	3
1.2 Deliverable overview and purposes .....	4
2. Summary of the Deliverable .....	6
3. List of technologies and solutions mapped .....	11

## 1. Background and objectives

### 1.1 IN4BLUE project

IN4BLUE project is a capacity-building project that addresses the lack of skills of local actors in the Interreg IT-HR programme area within creative industry, blue economy and other connected sectors to act upon and become part of digital and green transition actions.

In particular, the project focuses on micro and small enterprises from two sectors of blue economy: **coastal tourism and maritime transport and their connected value-chains**. Indeed, the blue economy sector is one of the most widespread in the program area and is one of the most affected sectors by the recent COVID crisis hence these enterprises have problem in finding capital for investing in digital and sustainable technologies and have limited skills in communicating new green-values to their users.

To tackle this problem, a new systematic approach is proposed in which **the community of creative actors and technology specialist in a form of SOCIAL IMPACT BUSINESS INCUBATORS are collaborating** together and internationally **to design and prototype new sustainable concepts and business processes for the blue economy sector**, all leading to increased capacity of area to cocreate and innovate.

IN4BLUE project will support minimum of 90 SMEs and host more than 50 events/training sessions resulting in 240 participations in the upskilling actions. Project will identify minimum 60 use-cases of green/digital transition and 18 sustainable technologies or sustainable techniques applicable in the blue economy sector and will result in minimum 12 original business case models and 6 business plans developed.

Project is innovative in a way that it brings the practices from the start-up ecosystem to traditional industry like the blue economy. The program is inclusive; it introduces new tools (design thinking, design sprints, hackathons) and new concepts (residency program, pitch sessions etc.) to the territory and it contributes to shifting the method of learning from common trainings to experience exchange and learn-by-doing practice.

Since project objectives are very challenging, and based on past experiences of project partners, it is crucial to identify and to constantly monitor all possible risks that may affect correct implementation and results' achievement in order to prepare and to adopt mitigation strategies.

## 1.2 Deliverable overview and purposes

The present deliverable is part of WP1 - Innovation ecosystem and IN4BLUE support program development and results from implementation of A1.1 - Mapping business ecosystem for competences and discovery of sustainable technology applicable to blue economy sector.

WP1 targets the specific challenge 6 of the program area: "Building or reinforcing transformation and digitalisation skills of SMEs and their networks, to boost innovation mainly in blue economy sectors and adopting circular economy practices".

In mapping technology solutions, PPs proceeded to map a wide range of items:

- public-private co-development practice;
- green solutions (such as energy efficient, Resource efficient, reducing environmental footprint, promotion of biodiversity etc.) taken by public organizations;
- public environmental events or social events connected to green transition;
- sustainable business cases (within but not limited to project targeted sectors sustainable tourism and maritime transport);
- transnational organizations supporting green transition.

## Italy – Croatia

---

Solutions mapped not only reside within the IT-HR programme area; some of them are outside Consortium ecosystem / countries but have been selected as potentially applicable to PPs' area and possibly to be promoted within the foreseen Social Business Incubators.

Contents of the D1.1.1 will be elaborated into a specific design (infographic or similar interactive tool), by PP2 and PP5 being in charge of project communication, in order to ease transferability of gathered inputs to specific target groups and stakeholders in the project area, especially during implementation of WP3, through targeted meetings, raise awareness events and communication tool.

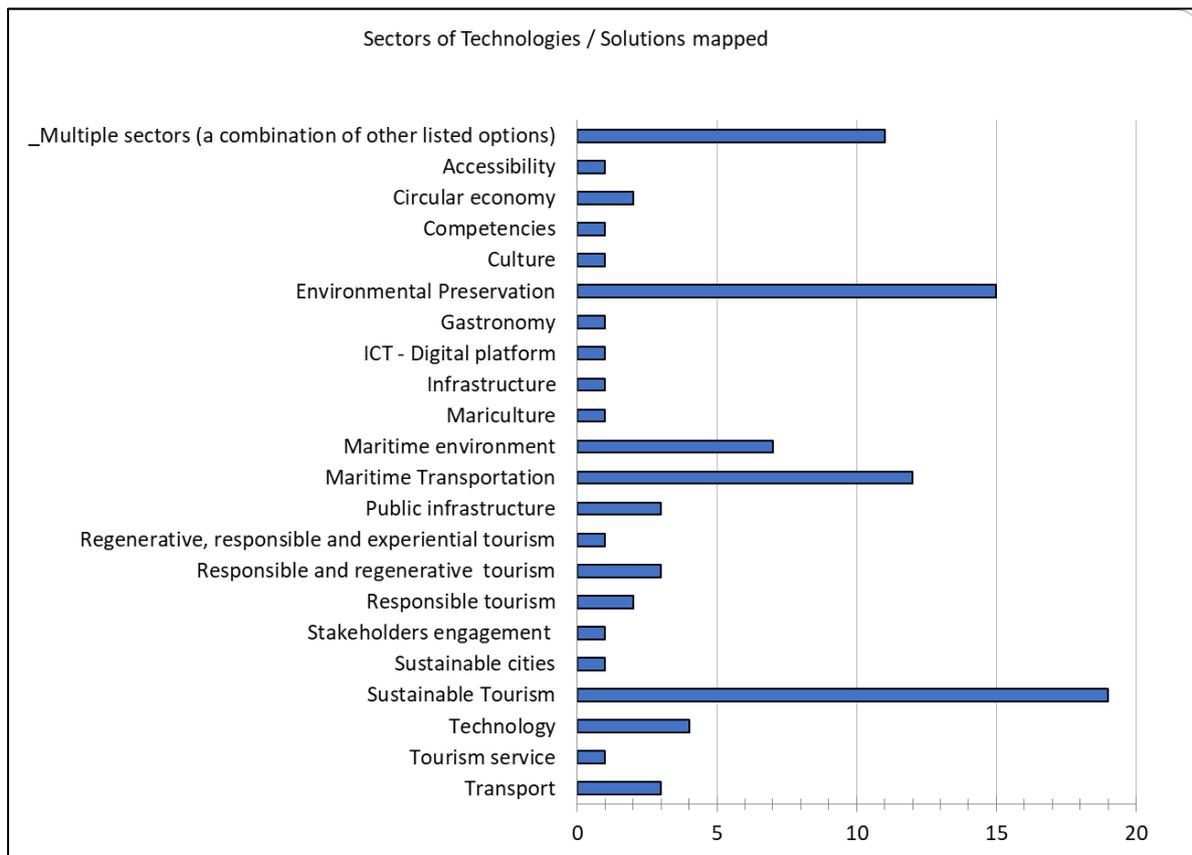

## 2. Summary of the Deliverable

It was initially foreseen to map at least 80 use-cases of digital and / or green technologies applicable in blue economy sector. Since the present document includes **93 use-cases** it can be said that IN4BLUE consortium achieved more than initially planned.

In the mapping process, PPs decided to highlight specific information about identified technology solutions such as: key features, innovation type, sectors and locations.

This approach led to some interesting data as in the graphics presented below.

## Italy – Croatia

---

Sustainable tourism, environmental / maritime preservation and maritime transportation are the main analyzed sectors, in line with IN4BLUE project purposes.

Technological sector and public infrastructures also represent important areas of analysis, well connected with main ones.

Some Interreg past projects and their results / outputs are mentioned in order to capitalize on the previous experiences of European territorial cooperation.

Innovation types reflect the main themes beyond IN4BLUE and present challenges of Italian and Croatian territories and organisations engaged in the project, although these challenges are also crucial to many other countries and regions as demonstrated by locations of technologies and solutions mapped as presented in the subsequent paragraph.

Most of the innovations selected are technological ones such as: data gathering and analysis, energy efficiency solutions, systems aiming to reduce waste, etc.

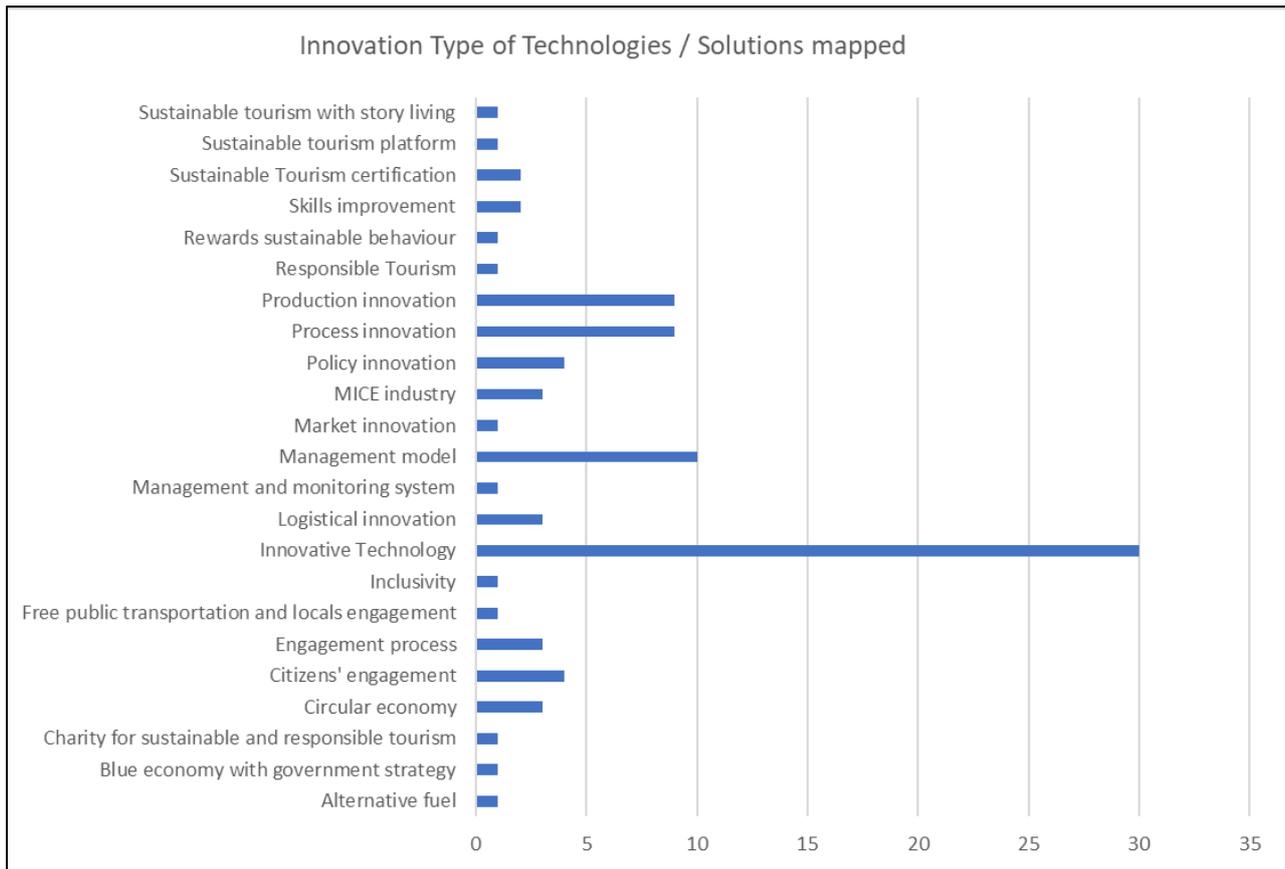

Process innovations were also prioritised as well as successful management models pursuing a positive impact on supply and distribution chains, strengthening cooperation among different stakeholders, public-private-civil alliances, promoting circular economy, etc.

“Sustainability” and “responsibility” are frequently mentioned in relation to tourism, in line with present policy orientation in Europe and beyond.

“Engagement” is also a recurrent term since no durable improvement is possible without having direct and indirect approval of citizens and stakeholders based on target territories.

Italy – Croatia

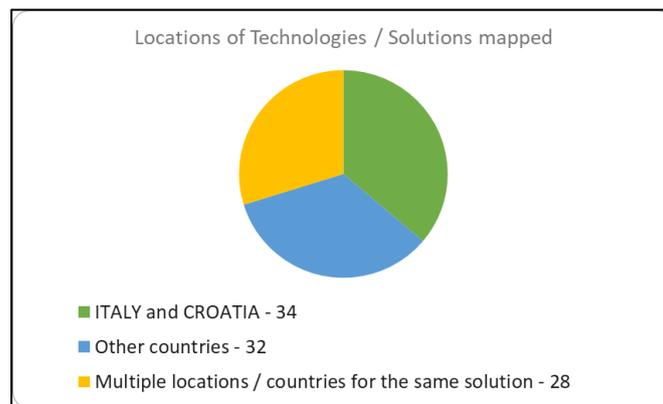

Territorial coverage of mapping was well balanced, too.

Considering Programme character and location of partner organizations, Italy and Croatia were prioritised although mapped technologies and solutions referring to these countries are located both within and beyond the Interreg Italy-Croatia programme area.

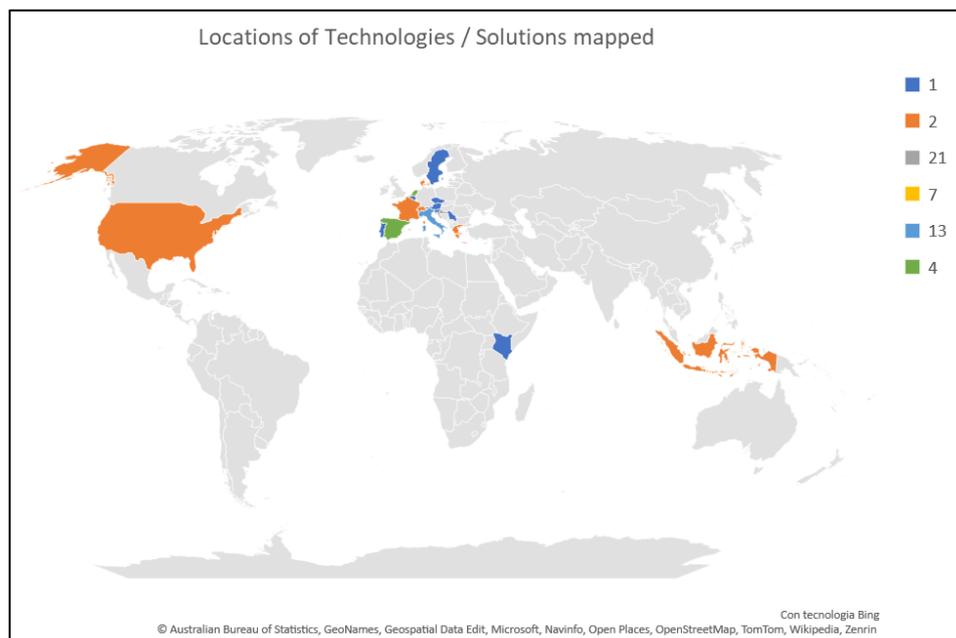

Many other countries are represented in the mapping, within and beyond Europe, and uses-cases referring / implemented in multiple countries at same time are specifically categorized in the graphics. Some of these latter may also include Italy and Croatia among the implementing countries.

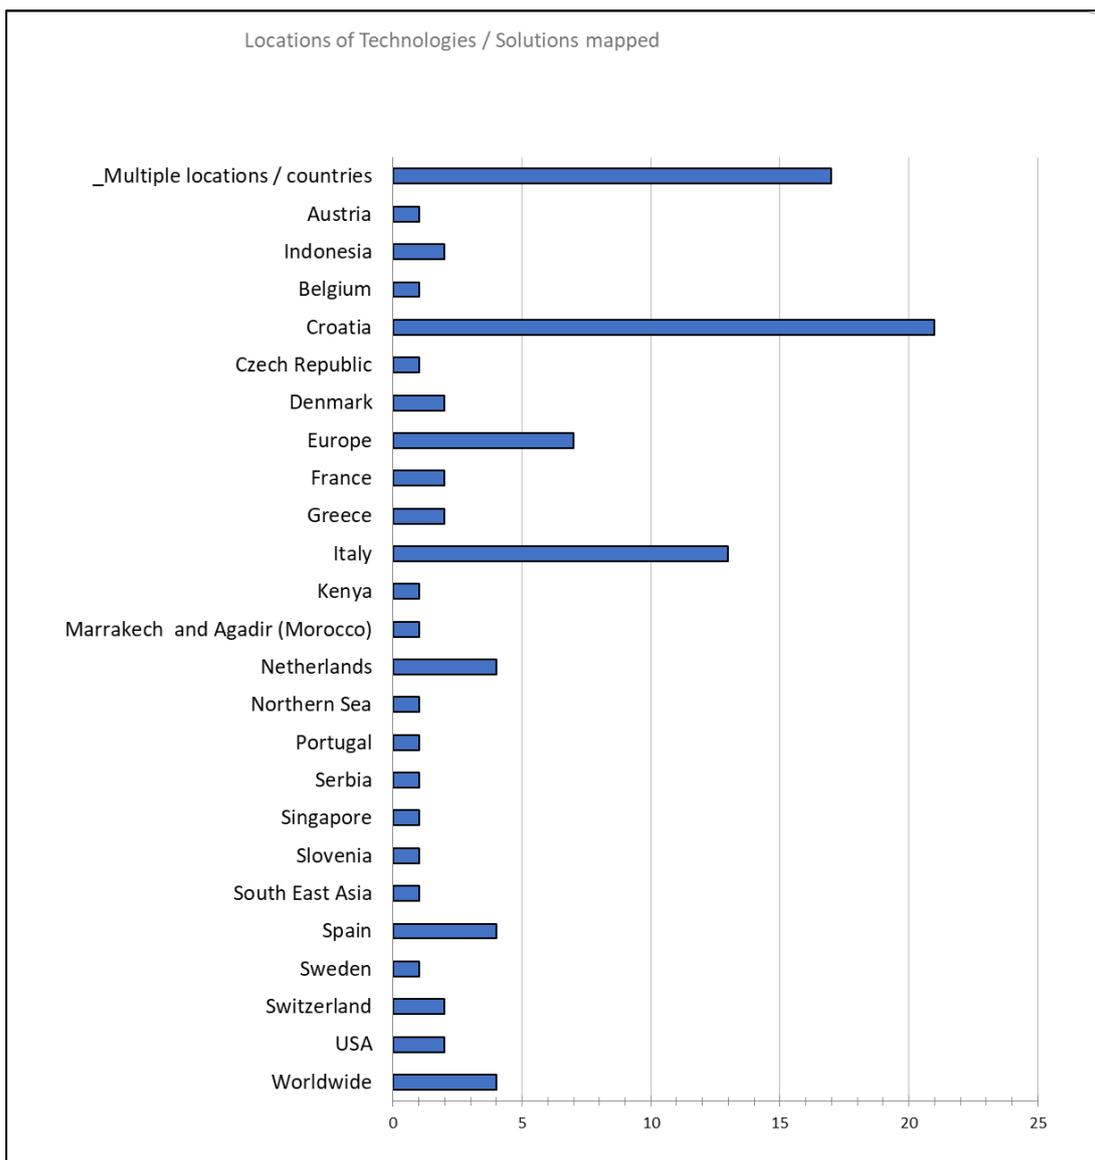

## Italy – Croatia

Below are more graphics summarizing data about mapped technologies and use-cases locations.

## Italy – Croatia

In the following pages is the complete list of technologies and solutions mapped at project level.

### 3. List of technologies and solutions mapped

PP	#	Name	Short description	Key Feature	Link	Innovation type	Sector elaboration	Location
IDA	1	<b>ECOcube</b>	ECOcube - a floating collection station for solid waste and wastewater from vessels.	Green sea mobility sector	<a href="#">LINK</a>	Production innovation	Maritime Transportation	Norway, Croatia (Istria)
IDA	2	<b>PROeco catamaran</b>	Eco-catamaran partially made of natural, environmentally friendly materials powered by environmentally friendly, solar energy	Green sea mobility sector	<a href="#">LINK</a>	Production innovation	Maritime Transportation	Croatia (Istria)
IDA	3	<b>S.I.C. d.o.o.</b>	Blue and green technologies in production phase	New technologies	<a href="#">LINK</a>	Process innovation	Mariculture	Croatia (Istria)

Italy – Croatia

PP	#	Name	Short description	Key Feature	Link	Innovation type	Sector elaboration	Location
IDA	4	<b>Maritime Environment-friendly TRanspOrt systems</b>	Improvement of environmental sustainability in the field of maritime transport through the development of hybrid solutions that will be adopted on vessels for the transport of passengers	Green sea mobility sector	<a href="#">LINK</a>	Production innovation	Maritime Transportation	Italy, Croatia (Istria)
IDA	5	<b>Sustainable Transport in Adriatic Coastal Areas and Hinterland</b>	Innovative mobility concepts for passenger transport in urban centres to reduce traffic congestion, improve air quality and reduce CO2 emissions	Green mobility	<a href="#">LINK</a>	Logistical innovation	Transport	Croatia (Poreč, Vodnjan), Italy
IDA	6	<b>GREEN and smart Mobility INDUstry innovation</b>	Strengthening SMEs' economic competitiveness and innovation capacities in the field of green and smart mobility in the Mediterranean area	Green mobility, SMEs	<a href="#">LINK</a>	Logistical innovation	Transport	Italy, Slovenia, Greece, BiH, Croatia (Istria), Croatia, France, Spain

Italy – Croatia

PP	#	Name	Short description	Key Feature	Link	Innovation type	Sector elaboration	Location
IDA	7	<b>Maritime and multimodal sustainable passenger transport solutions and services</b>	Multimodal solutions, innovative and smart tools and technologies to increasing multimodality and reduce the impact of transport on the environment	Green mobility	<a href="#">LINK</a>	Process innovation	Transport	Croatia, Italy
IDA	8	<b>Quality Network on Sustainable Tourism PLUS</b>	Promotion of highly experiential tourism, able to properly fulfil the potential of Adriatic – Ionian cultural heritage via the creation of sustainable quality products	Innovative tourism product	<a href="#">LINK</a>	Production innovation	Sustainable Tourism	Italy, Greece, Croatia (Istria), Montenegro
IDA	9	<b>Smart and Slow Tourism Supporting Adriatic Heritage for Tomorrow</b>	Establishing, managing and promoting Adriatic Region as smart, integrated, sustainable, accessible, year-round, green and slow tourist destination of the Mediterranean based on accessible, protected, valorised and promoted tangible and	Innovative tourism product, Sustainable tourism	<a href="#">LINK</a>	Production innovation	Sustainable Tourism	Croatia, Italy
