## Analysis

All PPs were involved for the communication campaign to contribute to the BRIGANTINE A 1.5 concerning the “Awareness campaign on the protection and conservation of high value seaweeds and seagrass meadows habitats”. To achieve this aims official communications of the Project all PPs participated and the results of this 2RP are summarized in the attached table (see table and annexes below).

## Annexes

### Table of the Target groups

| Target group                                                  | Description of the target group involvement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

activity is structured using an active learning approach, where students first engage with two thematic research papers, prepare a presentation for their classmates (flipped classroom model), and then test the equipment described in their presentation.

PP1 University of Udine\_(master degree student: 11 students)

#### Congress

- 1) Stecomed 1st International Congress for Sustainable Ecosystems in the Mediterranean area October 2 – 3, 2024. in Split, Croatia <https://stecomed2024.more.unist.hr/> In this congress a description of aims and preliminary tests concerning seagrass monitoring in Adriatic Sea were presented to scientific community during the poster section. The poster presents and describes these scientific topics.
- 2) Marine technologies and implementation for sustainable blue economy Padua (13 November 2024). In this congress a description of aims and challenges of Brigantine were presented to scientific community by LP. <https://mairos.org/news/marine-technologies-and-implementation-for-a-sustainable-blue-economy/>

A lot of activities proposed by BRIGANTINE team (University of Udine) to public during this event, with drones, algae, sensor to preserve our Adriatic Sea. Come on to visit our stands and discover the project!

Ecomondo fair 5-7 November 2024 (Rimini). Ecomondo at Rimini's Expo Centre gave us the perfect platform to showcase our European BRIGANTINE INTERREG project. Our team—Prof. Anna Annibaldi, Prof. Fabio Rindi, and Prof. Stefano Accoroni—took this opportunity to promote our work and strengthen collaborations with international experts.

14 November CROFISH 2024 fair, the most important Croatian fair dedicated to fishing and aquaculture, was held in Poreč (Croatia) from 22 to 24 November. Brigantine project was presented by our team from Rudjer Boskovic Institute. It was a great opportunity to promote the project with international experts. During the Fair, a series of side events was held which will include public discussions, expert lectures and meetings of partners – fishermen. RBI team took a lecture, aimed to talk about the state of the Adriatic Sea and Interreg projects Brigantine.

AQUAFARM 12 and 13 FEBRUARY (Pordenone). Brigantine attended the 8th edition of AQUAFARM, an international conference & trade show on aquaculture, shellfish farming, algaculture and fishing industry. Aquafarm (Pordenone Fiere, 12–13 February 2024): The event attracted 2,400 visitors, with 100 signatures collected at the stand (jointly organised with 2 other interreg projects, an IT-HR project MARINET and the IT-SLO project CIRCULAR RAINBOW, respectively). Prof. Rindi and Dr. Cingano (part of Brigantine Consortium) both presented the project, highlighting the role of macrophytes, the current monitoring system in use, and future prospects related to the use of the marine drone. MNoreoover, prof Cardinaletti presented about the innovation in acquacolture and presented the support coming from the new twechnolgies as marine drone for water quality monitoring). Their presentations were delivered as a publicly accessible talk. Brigantine was in this

Finanziati dall'Unione europea e coordinati dal dipartimento di Scienze agroalimentari, ambientali e animali dell'ateneo friulano, offrono la collaborazione scientifica tra Italia, Slovenia e Croazia. Claudio Tardito, il nome del primo progetto, è dedicato all'allevamento di mare promossi dal suo consorzio sempre più esteso dalla riva slovena, alla riduzione dell'impatto ambientale attraverso la produzione di energia dal sole, grazie all'attività di allevamento come aqua, inoltre a nuove tecnologie, alla digitalizzazione degli impianti per ottimizzare la produzione. La seconda iniziativa, Merlot, è incentrata sull'acquacoltura diversificata e sostenibile del salmone e fa parte del programma Interreg Italia-Croazia. L'obiettivo finale è la promozione delle qualità delle specie allevate e la promozione di pratiche sostenibili, in grado di migliorare l'efficienza e produttività del settore dell'allevamento in acqua. Si prevede il ritorno a un sistema di coltivazione del pesce basato sull'ottimizzazione artificiale con monitoraggio e gestione in tempo reale degli allevamenti. Anche il terzo progetto, Italgator, è parte del programma Interregionale Italia-Croazia ed è incentrato sulla conservazione della biodiversità dell'ambiente, attraverso la tutela di dati climatici e meteorologici raccolti da diverse marine. Gli ideatori hanno partner la Università di Udine, Zagabria e l'Università della Slovenia. L'ultimo ruolo italiano di Italgator, è l'accesso per il collegamento delle ricerche del sistema lagunare di Venezia. «Con questi progetti, le competenze in acquacoltura e promozione dell'ambiente marino si integrano», commenta il direttore del dipartimento dell'Università di Udine, Ital-FriuliVenezia Giulia, dall'Università della Slovenia, l'associazione psico-sociali Italia e l'Unione agroalimentare sperimentale delle Venete (Istria) hanno presentato il primo manuale sull'innovazione delle specie ittiche cresciute in allevamento, «che è un manuale operativo, pensato per offrire agli allevatori base guida pratica utile, almeno il presidente Agn, Mario Zucchi». © RIPRODUCI CON DIRITTO RISERVATO</p> |
