OVERVIEW ON LEARNING PROCESS SEMINARS ................................................................. 5
ATTRACTIVENESS AND RELIABILITY .............................................................................. 6
MAIN ISSUES ....................................................................................................................... 6
LESSON LEARNED .............................................................................................................. 7
Abstract

BLUTOURSYSTEM provides tourism operators with tools and skills to develop new business ecosystems. Capitalizing the knowledge gained with TourMedAssets, the project steers decision makers to rethink tourism, reduce gaps and design eco-innovative scenarios thus to promote sustainable growth.

The project aims to stimulate competitiveness, innovation and creative enhancement of the tourism offer.

The main aim is to enrich the analytical skills of stakeholders in order to improve the sustainable and creative tourism sector, while developing new knowledge based on advanced tools and services.

For this reason, learning sessions have been activated in some pilot areas in the eligible areas of the program and other dissemination and formative activities, for local actors.

Specific information about gaps and needs have been thus collected through interviews submitted to stakeholders, who represent both public and private sector in the tourism field.

WP4 has been then planned to achieve the specific objective 2 “Improving skills and capacities to develop new Blue Tourism CB networks and business ecosystem”.

Deliverable 4.3.2: this deliverable represent the outcome of the 4.3.1 workshops after a desk check and review in terms of robustness, attractiveness and reliability of the process and the results.
Overview on learning process seminars

All Workshop were interactive focused on stimulating creativity through collaborative working. Interactive workshops were useful in many situations. They are a great type of training for analyzing case studies. During the seminars a combination of lectures and participation during the joint discussions and solving tasks in teams were used. Most important model of learning is through Living Lab methodology and co-creation.

Main training objectives were:

• Enhancing knowledge regarding Destination Management and professionalization of Tourism Services Providers
  o Topics: Tourism development planning process, The organization of tourism destination management, Collaborative approach to destination management, Monitoring the quality of the tourist experience in the destination

• Professionalization of service providers in tourism and raising quality of tourism product as a prerequisite for the development of sustainable rural tourism
  o Topics: Expectations of guests and trends in tourism, Factors of success of relevant tourist products, Opportunities to improve the quality of accommodation, Designing and offering tourist experiences, Valuation of natural and cultural heritage in the function of tourism products development, Ecotourism, eco-agro tourism and rural tourism as a development strategy, Visitor management and Interpretation techniques

• Enhancing knowledge regarding Application of ICT and e-marketing in tourism business
  o Topics: The benefits of ICT / e-marketing in tourism / e-marketing, Essential features of a high-quality network location, Mobile web and mobile applications, User Generated Content (UGC) and Application in Tourism Marketing, New technological
trends in destination marketing, about AR (extended reality), QR codes, "Big data", wearable technology (wearables), Smart Cross Border Data System (example of "big data" in tourism), The status of "on-line" tourism market, Optimization (SEO) and Paid Advertising (PPC) as a Visibility Strategy

Attractiveness and reliability

The attractiveness of the process itself is based on frequent exposure to best practice examples, which focus significantly on attention, but also on linking examples to the situation in the region, and by jointly creating solutions or innovative ideas.

The reliability of the process is extremely dependent on networking and stakeholder collaboration. Without good cooperation between various public and private sector stakeholders in the destination, the tourist offer cannot be created. Networking is a vital component for the tourism destination development. When referring to the development of sustainable tourism

There are many benefits from networking, such as: strong connections and helping one another in finding opportunities to develop innovative sustainable tourism/ecotourism products, getting fresh ideas, because such a network can be a source of new perspectives and ideas. A wide network means broader access to new and valuable information for participating stakeholders. It is also important to highlight that different stakeholders mean different perspectives. Exchanging information can sometimes contribute to understanding local idiosyncrasies and differences. The point of networking in tourism is to develop professional relationships, share ideas and provide support, but also to stimulate and accelerate tourism development in a way that is sustainable in the long term.

Main issues

Issue1: Tourism quality is not only about the number of visitors but about the capacity to manage them – continuous communication of stakeholders (solution)
**Issue 2:** Technological or smart solutions alone are important but will not solve the issue of creative process. Integration of knowledge-based elements and passion (solution)

**Issue 3:** The need of detecting the influence of stakeholders is a high priority - therefore it is important to avoid under (or over) estimating of their impacts and relevance (solution)

**Lesson learned**

Plan development based on existing knowledge and resources in the destination and focus on private interests of tourism development stakeholders.

Be diverse: Make sure to include a rich diversity of stakeholder expertise, geography, and tactics from across the spectrum. This is an opportunity to reach out and mix the old with the new, including stakeholders from other regions and/or states.

Foster communication and collaboration mechanisms among all relevant stakeholders. Management strategies will be far more effectively if all relevant stakeholders work together compared with initiatives of individual stakeholders;

Understanding the importance to be involved in further networking can be insufficient. There is a need for clearing potential misunderstanding, which can be done only through time consumption activities.

Enhance the integration of local communities in the tourism value chain promoting their engagement in the sector and ensuring that tourism translates into wealth creation and decent jobs. Integrating local communities from the start will ensure they benefit from tourism from the start and will help bring together local stakeholders;
Set a strategic long-term plan for sustainable urban tourism including the definition of the carrying capacity for the city and for specific areas and attractions. This is particularly useful to implement strategies that aim at dispersal of visitors, visitor segmentation and those where new itineraries and attractions are developed more effectively;

Plan ahead through methodologies such as strategic foresight and scenario planning. The dynamic, volatile, uncertain, and complex global developments of today require an approach that does not (only) take the past but also identifies the driving forces of change and key uncertainties, to create plausible scenarios;

Development Potential - Scattered Hotels

One of the tourism products and services, whose creation and implementation are based on the factors of creativity and innovation, in cooperation with all stakeholders in the tourist destination within a sustainable development model, is certainly the business model of a scattered hotel. The scattered hotel model is based on the fact that the modern tourism industry is increasingly turning to selling experiences rather than the summer holidays or accommodation separated from the local community. Tourists travel for the experience and want to feel the spirit of a community, to 'buy' an experience that is very unique. A significant number of tourists design such experiences and vacations themselves, using numerous search tools and experiences of others. There is also an increase in the number of tourists who use specialized agencies to design such experiences.

When designing a scattered hotel, it is extremely important that the whole project exudes the spirit and atmosphere of the place and thus be a unique product that has limited competition in the tourism market.

Korcula's strategic tourism goals are aimed at enhancing the competitiveness of the destination and, in addition to managing the destination and developing products, attractions, marketing and infrastructure, are related to the accommodation capacities and supply, ie. hotel investments. Although Croatian tourism has undergone major changes in the last 10 years, however, when it
comes to the construction and opening of new multi-star hotels, there are still great unrealized potential for expanding the offer and building new hotel facilities in Korcula, which will eventually extend the season and change the structure guests in the destination (middle-aged tourists of higher paying power with whom passive rest, relaxation and gastronomy are the primary motives of arrival, and to which Korcula is oriented). According to the analysis of the Korcula tourism market, private accommodation still dominates in total capacities, but at the peak of the season, July and August, there is almost no room for growth in occupancy, which is why the activation of new capacities is the only possible solution for the further increase in the number of nights. In addition to the mentioned market trends and potentials, the selected area of Korcula meets the standards for construction of a scattered hotel due to good transport connections, preserved quality of space, cultural and historical heritage, natural beauties, good predispositions for the development of the local economy and specific forms of tourism and orientation to the principles of sustainable development.

Therefore, investing and building a scattered hotel on the island of Korcula is justified, but in order for it to be successful, it is necessary to follow the development guidelines for the construction and operation of the scattered hotel, which are mutually suggested by examples of good practice of scattered hotels, the Blutoursystem project and Croatian legislation. The guidelines relate to design, organizational, sales and marketing recommendations, community relations, and planning. Emphasizing the importance of respecting the 'living room atmosphere' and consistency in recognizability, but according to the level of historical and conservation protection, important elements are the selection of the appropriate organizational structure, market niche, communication channels and the need to establish broad mutual interest cooperation with public and private bodies.
